

The Davistown Museum
The Ancient Dominions of Maine: An Archaeology of Tools
Interactive Displays

In the main hall of the museum there are three areas of tools that are culled out of the main collection and displayed in a manner that allows museum visitors to hold, feel and identify each item.

Section I of our interactive display consists of a workbench with reference books and a representative selection of edge tools that visitors can handle and contemplate. This selection of tools is intended to illustrate some of the salient characteristics of handmade pre-Industrial Revolution hand tools. This area is organized on the premise that visitors can have a better understanding of the significance of early tools if they can touch them and view their manufacturers' signatures.

Section III of the museum's interactive display consists of tools on exhibit on the right side of the hall as components of our assemblages of found artifacts. These assemblages have been the most commented on of all our exhibits by museum visitors to this date. This exhibit consists of 24 numbered, unidentified tools with a register at the end of the counter in which visitors may write their opinions as to what they think these unidentified tools are or what they were used for.

Section II of this display, the TOOL EXAM, consists of over 50 unusual tools that visitors are invited to closely inspect before filling out the museum's tool examination form. Museum visitors may then leave off their answer sheets to become a part of the museum collection. Humorous and imaginative responses to our tool examination are as welcome as are more serious attempts to identify each tool. This examination is especially designed for "kids" of any age wishing to learn more about some of the obscure tools no longer in use in most workshops.

The tools for section I and II are listed in their respective time categories of Maritime I, II, III, IV or IR; only the unidentified section III tool group is listed below. This section is under reconstruction and does not collate with the current displays. The Tool Exam (section II) listing may also be viewed by clicking the link below.
